Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japan 2002148092 in view of Derby (5,234,037). Japan/092 discloses Applicant's powder body metering apparatus substantially as claimed with the exception of a closing member underneath the porous body 19 on the lower portion. Note that the publication date of Japan/092 is 5/22/2007 which precedes Applicant's earliest priority date of 6/27/2002 for this application. However, Derby teaches another powder column device as is the dust collector 152 and further teaches the use of a lower slide valve 151 for the purpose of periodically cleaning and maintaining the device. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the apparatus of Japan/092 with a lower portion outlet valve as, for example, taught by Derby in order to periodically cleaning and maintaining the device.

3. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japan 2002148092 in view of V. R. Clark (2,588,2065), L. B. Clark (868,641), West (1,105,732), and Hewson (1,149,442). Japan/092 discloses Applicant's powder body metering apparatus substantially as claimed with the exception of a closing member underneath the porous body 19 on the lower portion. Note that the publication date of Japan/092 is 5/22/2007 which precedes Applicant's earliest priority date of 6/27/2002 for this application. However, V. R. Clark, L. B. Clark, West, and Hewson teach other

metering apparatus with adjustable outlet pipes and further teach that it is generally well known in the art to provide adjustable outlet pipe metering dispensers with a lower portion outlet valve. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the apparatus of Japan/092 with a lower portion outlet valve as, for example, taught by V. R. Clark, L. B. Clark, West, and Hewson because it is generally well known in the art to provide adjustable outlet pipe metering dispensers with a lower portion slide valve.
